

Candy Treats

a Scientific Method Project

Background

Congratulations! You have been hired by *Duncan's Candy Company* to create a new *Candy Treat* to be sold during the holiday season. Your creation must be a completely **NEW creation**, unlike any candy treat on the market today – so put on your best Willy Wonka thinking hat & get ready to use your imagination!

Your candy treat can be **any shape or size** and may include any ingredients that you want, including parts of other candy products. Ingredients that you might want to consider are: chocolate, caramel, peanuts, gummies, marshmallows, nuts, raisins, peanut butter, jelly, sprinkles, cookies, Rice Krispies or other cereals, brownies, other pieces of candy – ex. Twix, Hershey bars, Snickers, Reese's Cups, Skittles, Sour Patch Kids, etc. **THE SKY IS THE LIMIT!** Use what **YOU** think would taste good. Yum!

Assignment

You **MUST** create your new candy sensation by following the steps of the **Scientific Method**. Follow the paper provided to you in class to help you organize the process. Remember, the candy must be **your invention** and it must be **made by you!**

Along with the assignment paper, you must be prepared to give a brief presentation to the class along with a sample of your new candy treat. Please bring a sample of your candy treat in a Ziploc bag with your name written on the outside. You **MUST** bring at least one sample for grading purposes but if you'd like to bring more, to share with the class, then please bring enough for 25 students.

Due Date

ALL project paperwork & *Candy Treat* creations are **DUE on Tuesday, 10/31!**

Use your imagination, be creative and have fun creating the next BEST Candy Treat!
